

SiteWorx™ is an innovative, cloud-based platform that combines connected lighting, IoT sensors, and software to create smarter buildings and businesses.

## A Simple, Scalable Smart Building Solution

The IoT isn't just the future of business intelligence, but the present. Through connected lighting and a wealth of sensors, SiteWorx transforms any building, facility, or enterprise into a source of insightful, actionable data.

Control and optimize energy usage, monitor and maintain peak environmental conditions, or track and leverage occupancy data to hone operations. With SiteWorx, it's easy to customize, launch, and expand sensor-based IoT solutions that improve cost efficiency, productivity, and safety across your organization.

## Intelligence Overhead™

Digital Lumens sensors and control modules provide new perspective into your business. Often installed in the ceiling or at a high vantage point, the sensors collect key operational and environmental data and communicate it via the secure, cloud-based platform.

As information is received, SiteWorx software-based applications deliver advanced analytics and actionable reports necessary to turn data into real-world ROI. In addition, SiteWorx allows you to control lighting and other sensor-based inputs remotely, and ensure that your facility is running on all cylinders no matter where you are.

## SiteWorx™ Web & Mobile Applications:

### SITWORX™ TUNE

#### Intelligent Lighting Control

A simple, powerful lighting control application, Tune uses sensor-based intelligence and advanced software to maximize energy savings and improve employee productivity and safety.

### SITWORX™ SENSE

#### Temperature & RH Monitoring

A one-of-a-kind environmental monitoring solution, Sense tracks, reports, and verifies temperature and humidity to create a smarter building.

### SITWORX™ AMP

#### Power Monitoring & Management

An energy monitoring application, Amp measures and analyzes non-lighting energy usage patterns to create a more sustainable, efficient, and cost-effective smart building.

### SITWORX™ SECURE

#### Zone-Based Building Security

A smart building security system, Secure uses facility-wide IoT sensors to keep assets and employees safe at all times.

### SITWORX™ AREA

#### Space Optimization

An occupancy and path tracking solution, Area delivers insight into how physical space can be better utilized for a smarter building.
