1. Purpose & Benefits
2. Solution Architecture
3. Project Approach
4. Main Advantages
5. Why WeDo

# PURPOSE & BENEFITS

# PURPOSE

- WeDo is purposing to help Telcos achieve their objectives by providing a state of the art **data retention solution** to store traffic related data with the purpose of providing the authorities such information in a fast and secure manner.
- Telecommunications (Interception and Access) Amendment (Data Retention) Bill 2014

# PURPOSE

- Communication providers **must ensure the completeness** and integrity of the data they retain. This means that they must have a procedure in place to track all relevant categories of data and to capture all data points within those categories.
- Communication providers **must protect the data** against accidental or intentional destruction; accidental loss or alteration; unauthorized or unlawful storage; processing, access, disclosure or accession by unauthorized persons.
- At the end of the retention period, the communication provider is obliged to **destroy the retained data**.

# PURPOSE

- Information to be **retained**:
  - the identity of the subscriber to a service
  - the source and destination of a communication
  - the date, time and duration
  - the type of communication
  - the location of the equipment used

# BENEFITS

RAID Data Retention is a solution focused in data storage, search and information retrieval, based on WeDo Framework to support:

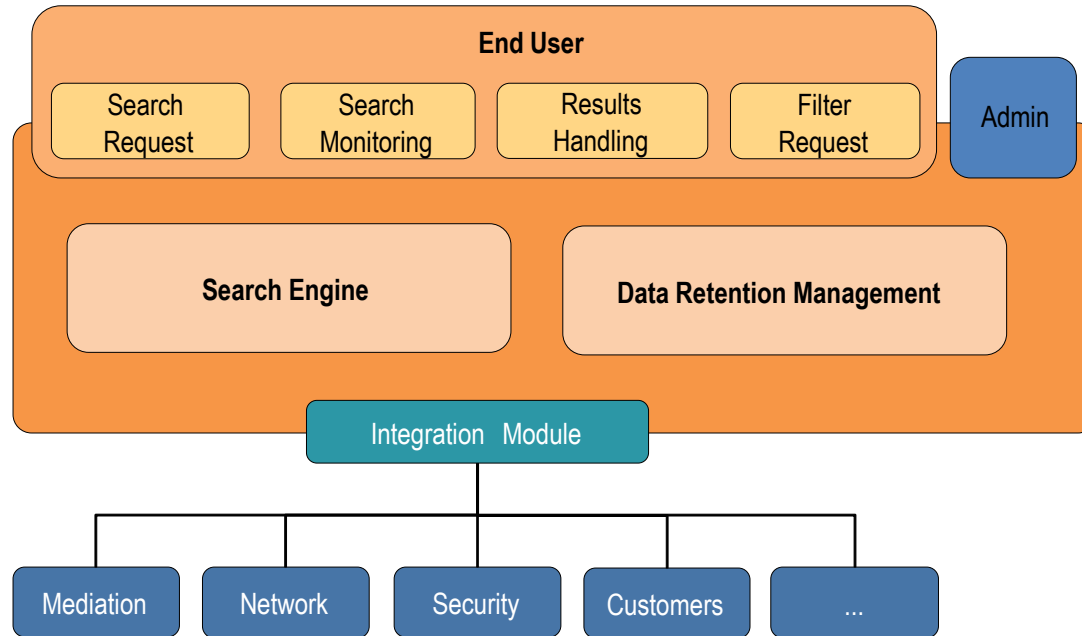

- **Integration** with other systems
  - ✓ Be prepared for quickly adapt in case of network elements or network infrastructure change.
- **Large volumes** of data
  - ✓ Store billions of records per day of data generated at various sources in the network
- **Security** requirements
  - ✓ Maintain high security and restrict access to all xDR and customer data to ensure data confidentiality
- **Advanced Visualization**
  - ✓ Handle hundreds of inquiries by CSP assistants and law enforcement agencies per day

# ARCHITECTURE

# SOLUTION ARCHITECTURE

## *User Interfaces*

Extensive and Configurable report system

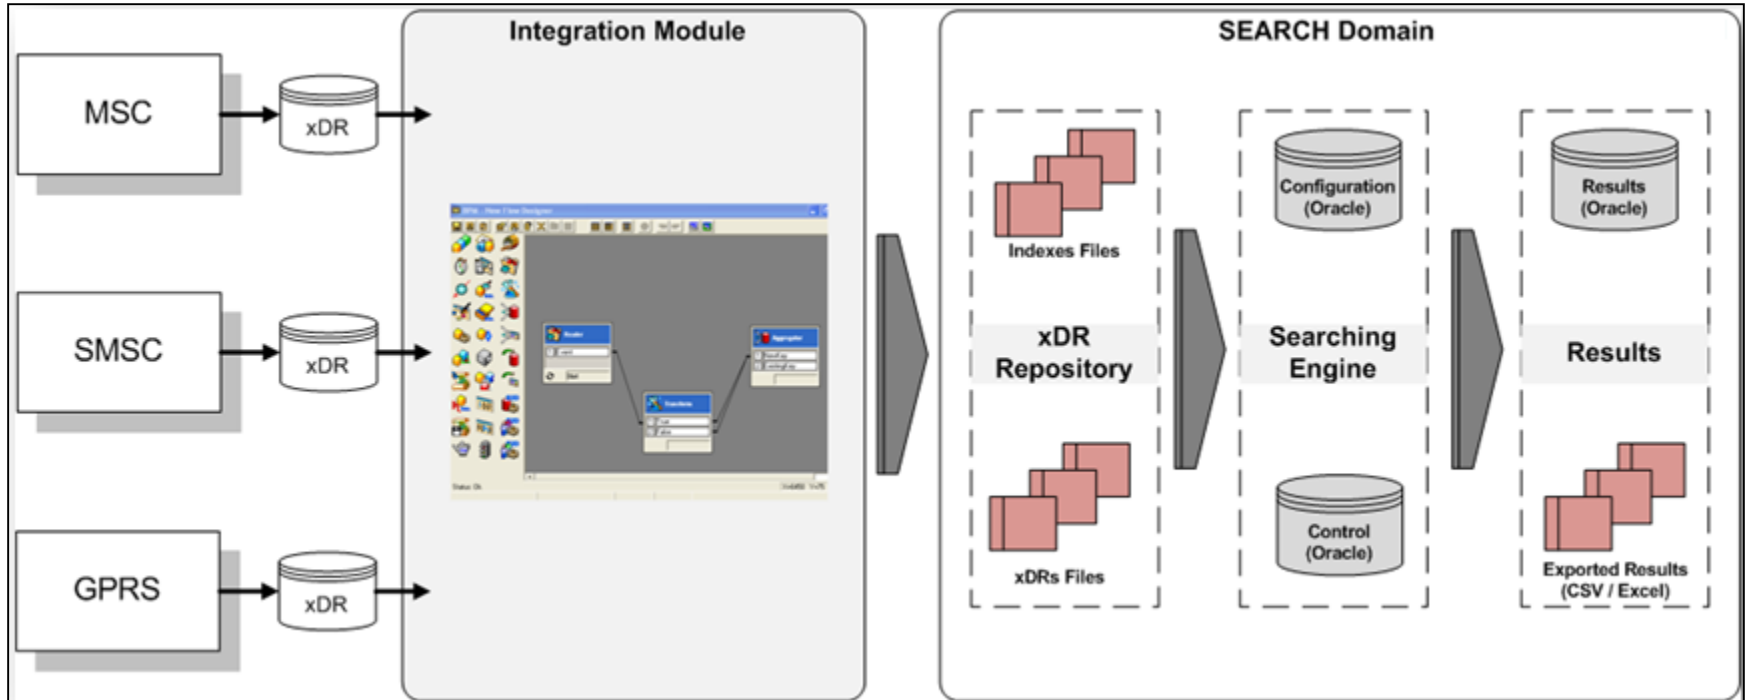

## *Solution Modules*

Fast and efficient search

## *Seamless Integration*

Powerful and simple integration with peripheral systems

# SOLUTION ARCHITECTURE

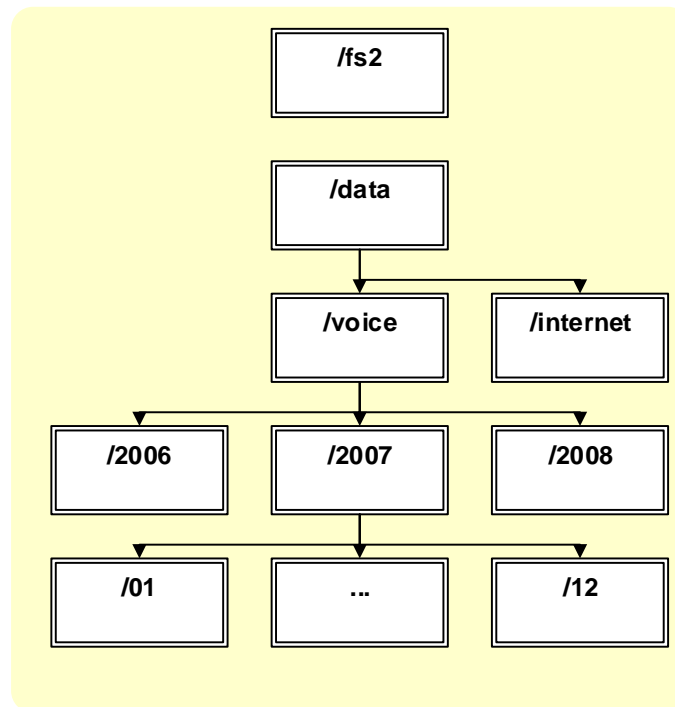

# Physical Data Organization

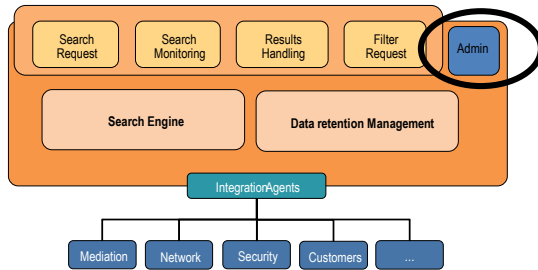

The solution works with two data types:

- **Relational tables:** store control information about data files, searches, results and general configurations.
- **Flat files:** xDR files used by search processes.

## Data Storage (multiple partitions)

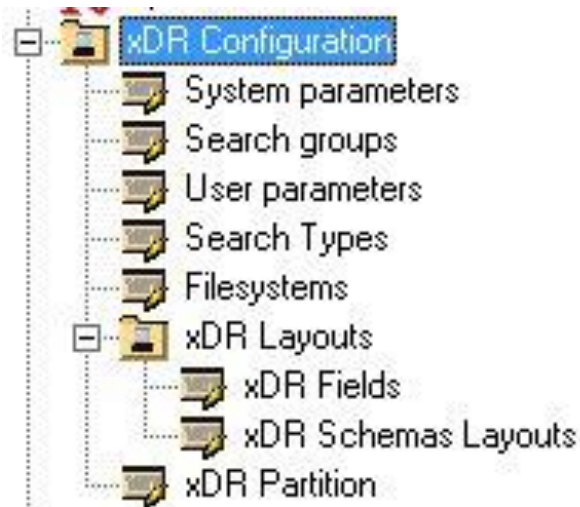

# SOLUTION ARCHITECTURE

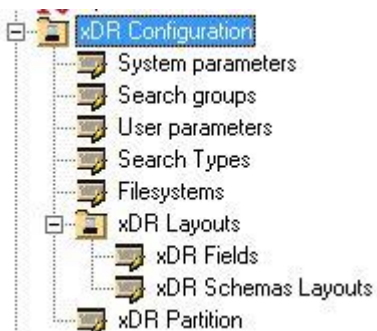

- **Admin area** is used to configured search related activities like:

- Schemas layouts
- Search Types
- Search groups
- User parameters
- System parameters
- xDR partitions

# SOLUTION ARCHITECTURE

P\_START\_HOUR: 12, 13, 14     Editable,  Visible

## Filesystems

	NAME	STATUS	ROOT PATH	USAGE PERCENT
Delete	SEARCH1_FILESYSTEM	Available	/search1/search1	18
Delete	SEARCH2_FILESYSTEM	Available	/search2/search2	23
Delete	SEARCH3_FILESYSTEM	In use	/search3	26
Delete	SEARCH4_FILESYSTEM	Available	/search4	41
Delete	SEARCH5_FILESYSTEM	Available	/search5	35

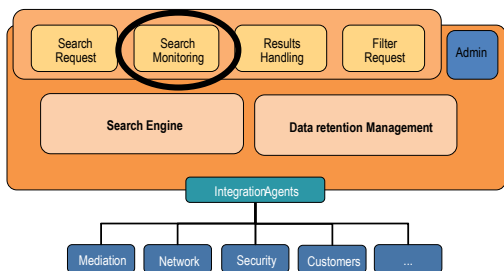

# SOLUTION ARCHITECTURE

- Predefined search;  
Free search;  
Search scheduling
- Define a set of criteria values that will be used in the predefined search expression.
- For example:
  - Originated calls from a specific CELL
  - Terminated calls to a set of numbers.

The screenshot shows the 'SEARCH' application interface. The top navigation bar includes 'WELCOME', 'SEARCH REQUESTS' (highlighted), 'CLASSIC', and 'CONFIGURATION'. Below the navigation bar, there is a breadcrumb trail: 'Search Requests (Search Requests) / New Search Request (New Search Request)'. The main heading is 'Request New Search'. The interface is organized into sections: 'ORDER', 'CTXP\_SEARCH\_REQUEST', and 'Request Name\*'. The 'Request Name\*' field contains the text 'Search for calls in CELL ABC during the attacks'. Below this, there is a 'Period Type\*' dropdown menu set to 'Date Period'. The 'Start Date\*' is '2015-02-04' and the 'End Date\*' is '2015-02-13'. The 'Request Type\*' dropdown menu is set to 'Search Communications by CELL'. The 'Cell ID\*' dropdown menu is set to 'C0043 - Paris'. There is an 'Input Filename' field, a 'Keep CDRs' checkbox (checked), and an 'Until' date field.

# SOLUTION ARCHITECTURE

- **Search List** allows monitoring searches execution.
- **Perform action** as *clone, cancel, suspend, resume* and *result view*.

**SEARCH** WELCOME SEARCH REQUESTS CLASSIC CONFIGURATION

## Map

# SOLUTION ARCHITECTURE

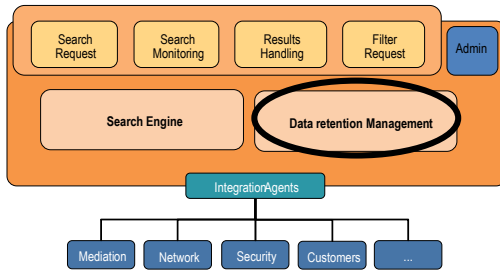

- **Filter** feature allow the extension of the retention period for a set of entities (e.g. A\_NUMBER=0414240147 is under investigation)
- In the same way as when performing searches users are able to mark some entities as being in a **watch list** and disable their removal when retention period terminates
- The list of **marked entities** are available in specific portal area

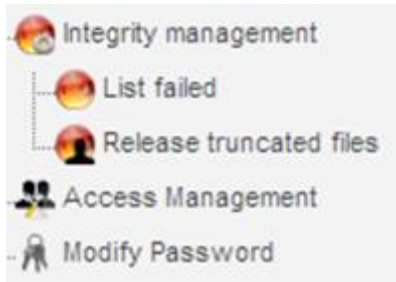

## Search: My Filters

	FILTER ID	FILTER TYPE NAME	FILTER NAME	DESCRIPTION	SUBMIT DATE	EXPIRATION DATE	USER ID	AUDIT EXPRESSION	
Clone	1	A_NUMBER Filter	Process #123POR43S	Process #123POR43S	2009-10-30 18:59:58		user1	(A_NUMBER = "351992451245")	Delete
Clone	2	A_NUMBER Filter	Process #632PERY43S	Process #632PERY43S	2009-10-30 19:00:50	2010-12-25	user1	(A_NUMBER = "351992451245")	Delete
Clone	3	Free Filter	Process #7E48FZX23S	Process #632PERY43S	2009-10-30 19:02:21		user1	FieldValue(A_NUMBER) = "3519325523675" OR FieldValue(B_NUMBER) = "3519325523675" OR FieldValue(C_NUMBER) = "3519325523675"	Delete

# SOLUTION ARCHITECTURE

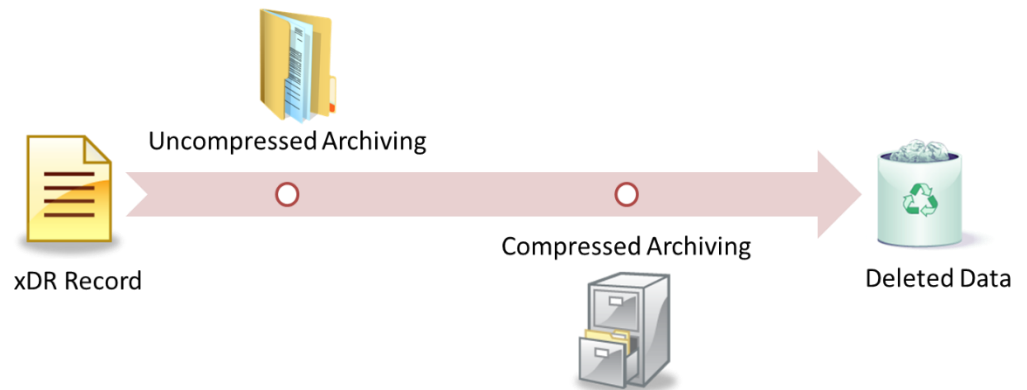

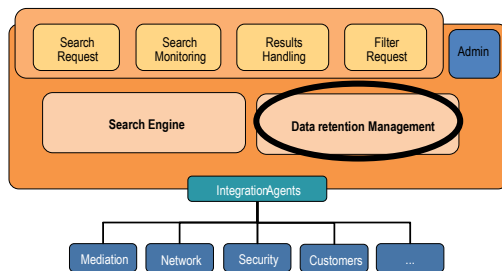

- Search is able to store all repository data in an **encrypted** format.
- Can be combined with xDR **compression**
- File integrity is ensured using
  - File Integrity Validation
  - “Untrusted” files management

File Type	File ID	Field ID	Last Check	Status ID	Status		
SCH	1.246		2009-10-26 17:23:41	ADI014	File integrity check failed	Accept	Truncate
SCH	1.205		2009-10-26 17:23:43	ADI014	File integrity check failed	Accept	Truncate
SCH	1.214		2009-10-26 17:23:44	ADI014	File integrity check failed	Accept	Truncate
SCH	1.217		2009-10-26 17:23:44	ADI014	File integrity check failed	Accept	Truncate

# SOLUTION ARCHITECTURE

- Perform the automatic **housekeeping** process, such as:
  - Remove older xDR files, according to the configured retention time.
  - Remove indexes files that have been excluded by the administrator through the interface.
  - Compress and decompress xDR files.
  - Remove searches results.
  - Send notifications referring to searches results removal.

# SOLUTION SECURITY

Topic	Description
<b>Session Management</b>	WeDo data retention solution manages the user sessions and its own application session, allowing the existence of several simultaneous sessions. This service provides not only the creation of request execution sessions but also validates the access of each of the requests.
<b>Access Management</b>	<p>WeDo data retention solution allows the management and control of users' access. The user is clearly identified by username and password, validating in turn the execution privileges for the system operations. This way, any time a request is received by the server, the access manager is validated.</p> <p>WeDo data retention solution implements its own access management policies, allows a great flexibility at the user profile level for each system area, considering a profile to be a set of permissions and each operation requiring a set of permissions</p>
<b>Security Issues</b>	Security aspects are one of the focuses of this solution due to their importance and criticality. This concern with security is dealt with globally and includes elements related to network, systems, application and processes. The systems and network security is the base of all security policy to implement under this solution. It is essential to ensure the systems integrity and also of the network in which the application platform is based. Once the security at platforms and network level is ensured, it is necessary to make sure that at the application level there are no common passwords or password sharing among users.
<b>Configuration and Management access restriction</b>	WeDo data retention solution allows users' profiles definition, and only the "administrator" profile is allowed to configure and map the processes.
<b>Access Audit</b>	Notwithstanding the preventive measures taken during and after the solution implementation in what security is concerned, it is also essential to ensure audit mechanisms once the system is productive. In this sense the solution creates audit. In these records the relevant data about the performed or attempted operation will be recorded, as well as the user, relevant operations values and session data. From these records it will be possible to detect abusive use situations and attempts to perform forbidden operations. The proposed solution allows the definition of rules according to the operation, amounts involved, users, profiles and criticality levels.
<b>Logging</b>	<p>WeDo data retention solution keeps tracking of its processes and actions through logging capabilities.</p> <p>Each data retention solution application component creates log files where it writes its actions, depending on the log level specified during installation (or reconfigured).</p> <p>A production server should have its log level configured to NORMAL level which allows simple tracing/log messages to be written (e.g. indicating that the applications are alive) and important error messages.</p>
<b>Data Access Control</b>	<p>WeDo data retention solution allows restricting data access according user permission through the "Search Type" facility.</p> <p>Using this facility, the administrator defines which type of data (schemas and partitioning fields) will be available to the end-user when requesting a specific query, based on a previously created template.</p>

# PROJECT APPROACH

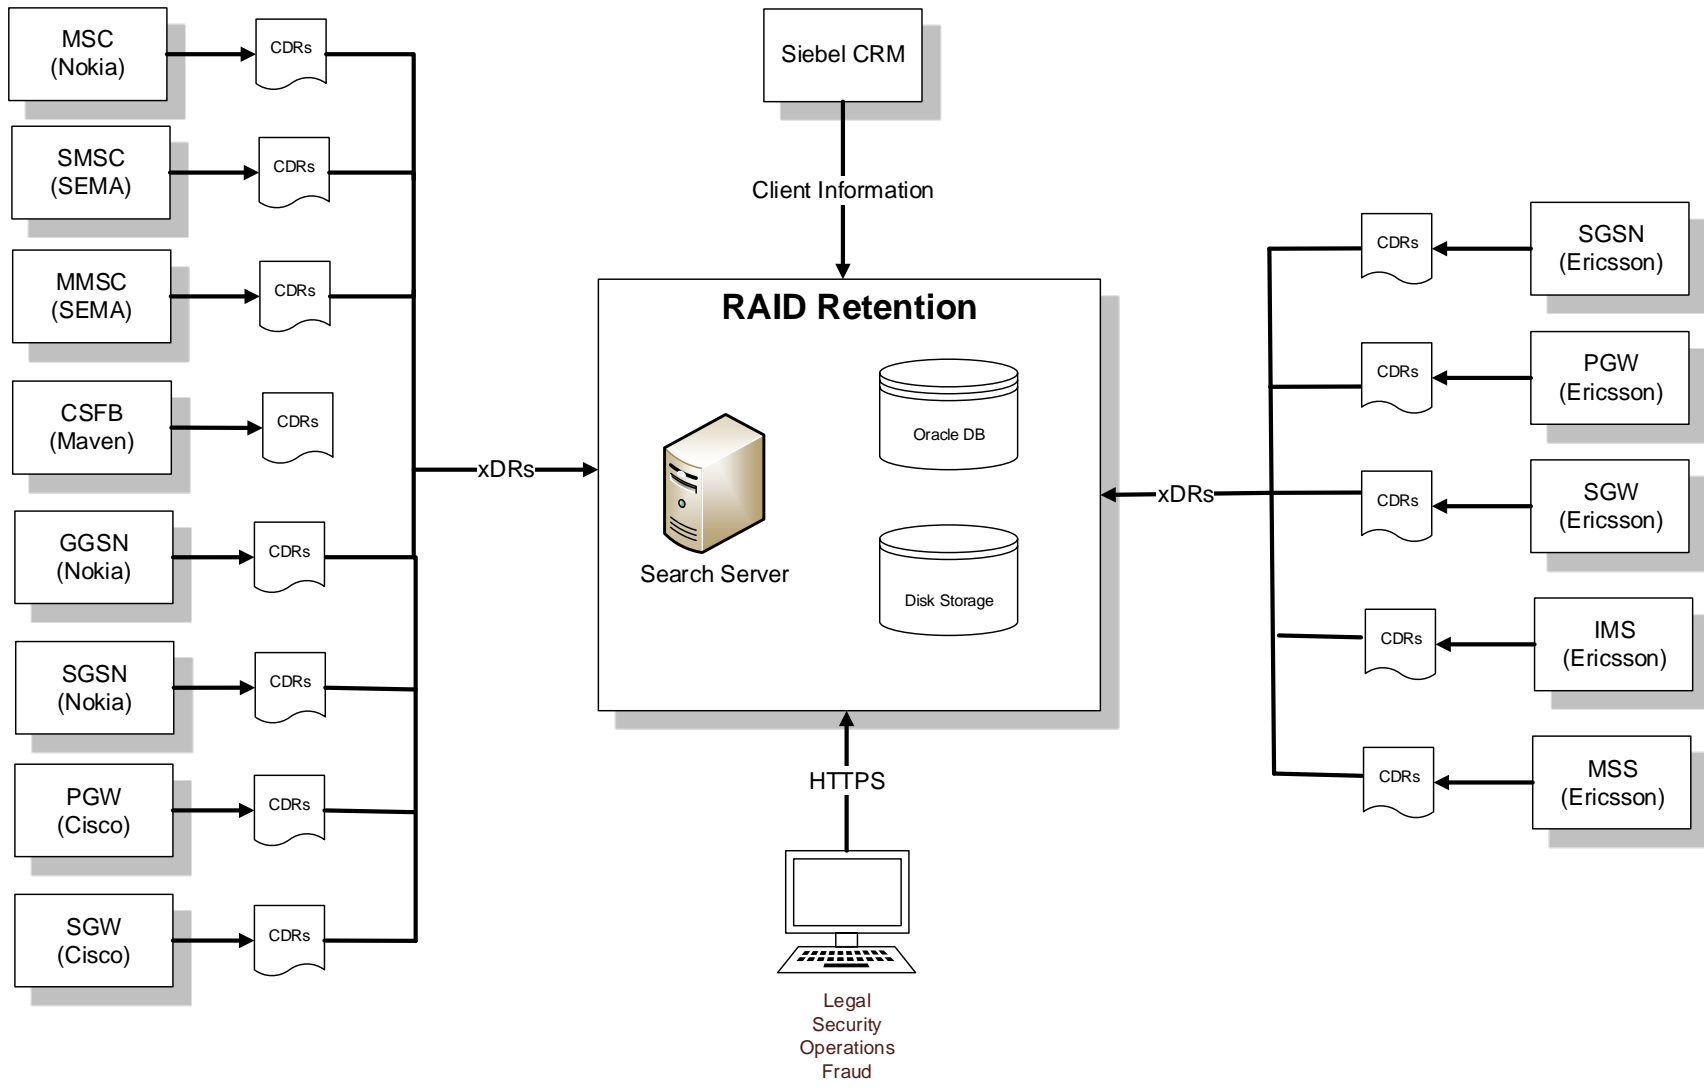

# PROJECT APPROACH

- 1Billion xDRs to be processed daily
- xDR average size of 250bytes
- 2 Year data retention period
- 13 data interfaces
- Data migration?

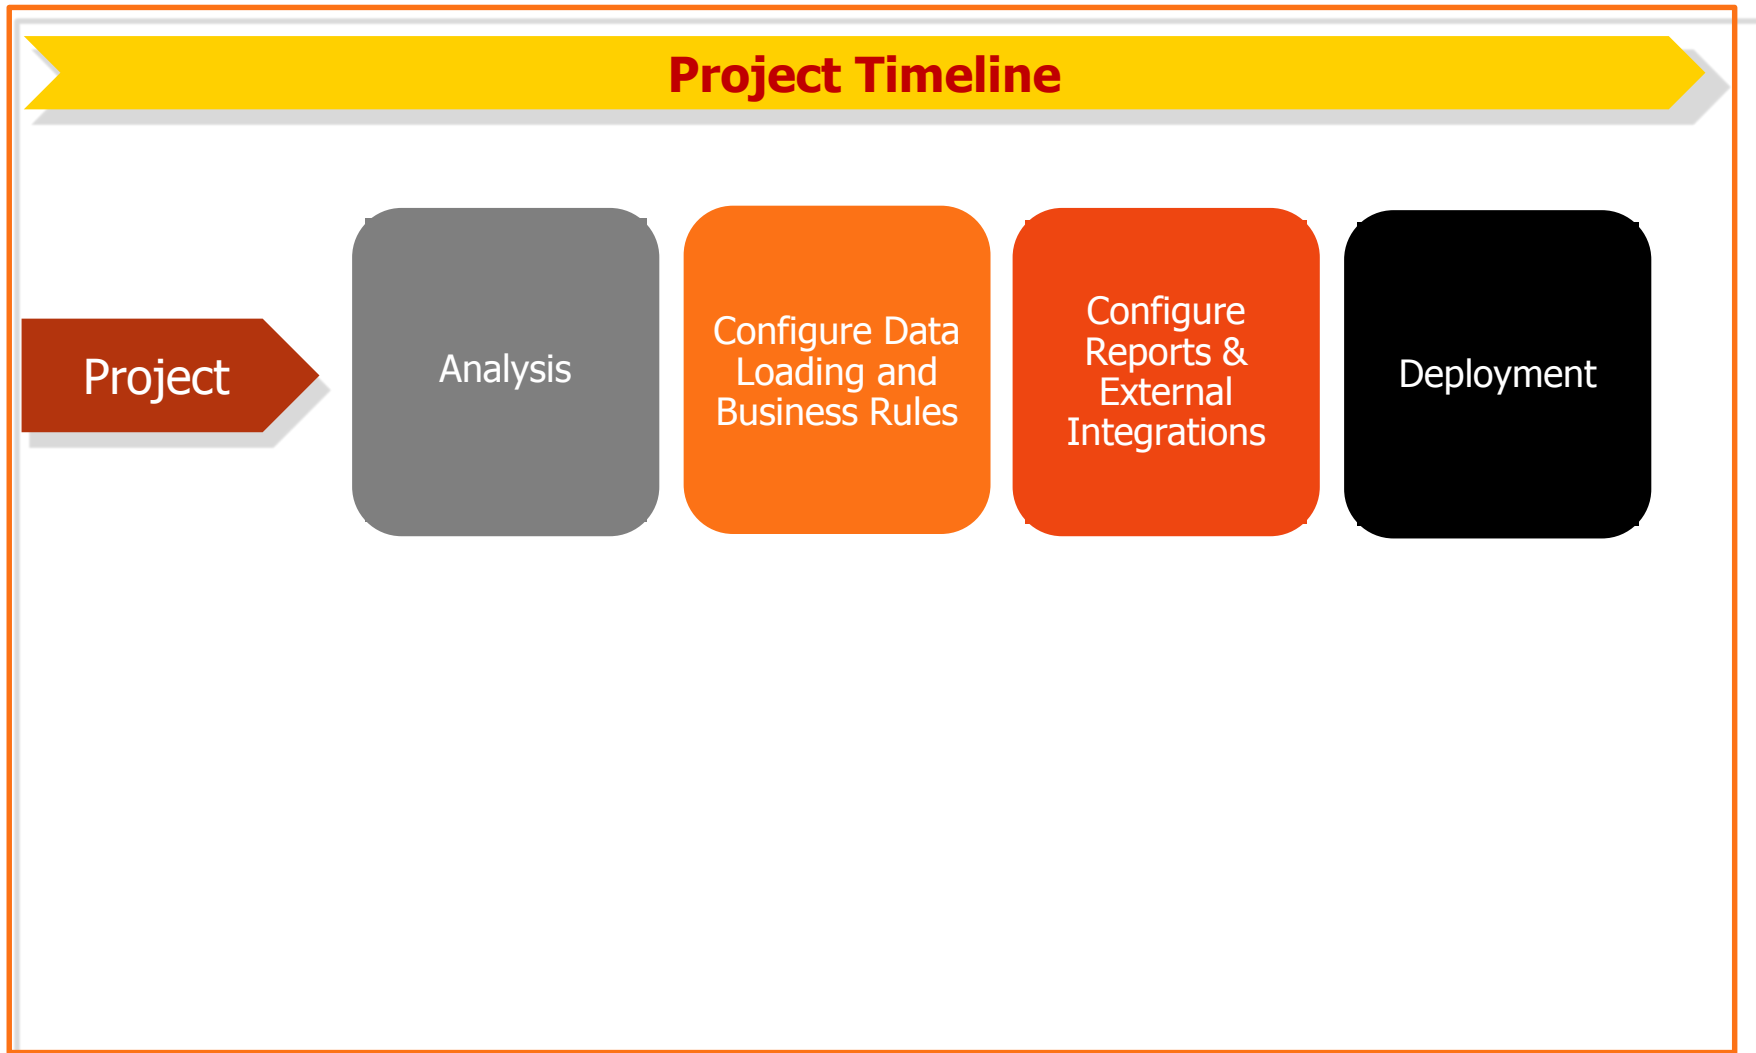

# PROJECT APPROACH

WeDo Technologies © 2015 – strictly confidential information. All rights reserved.

# PROJECT APPROACH

# Main Advantages

# MAIN ADVANTAGES

## High Performance & Capacity

The system can ingest several billion data records per day, supporting the transaction rates generated by large telecommunications networks with millions of subscribers.

Better throughput for search request processing due to:

- the allocation of several processes for a single search request (parallel processing);
- multiple execution queues.

## Seamless Integration

The system has been designed for seamless integration into existing multi-vendor and multi-service networks.

Supports multiple integration channels: ftp, webservice, remote database connection, ...

## Strong Security

Comprehensive security features like role-based access control, and integrity checks prevent unauthorized access and manipulation of sensitive data during storage and handover.

## Cost-efficient

Lower demand for disk space because it uses flat files to archive xDRs, compared to solutions that use Oracle data base. A typical reduction of 4:1.

# RAID Retention vs Data Warehouse

## Near real time response

Faster answer to internal and external requests

## Control Mechanisms

Availability of several mechanisms to continuously and adequately optimize the solution resources and improve search performance

## Security

SoX compliance allows the operator to have full knowledge of all the accesses to the tool

## Storage capability

Ability to store data related with a longer period of time than DW solutions

## Higher IT independency

# WHY WEDO?

# WHY WEDO?

- WeDo is the worldwide leader of Business Assurance vendors in the market with the **most impressive track record of successful implementations**;
- A **solid and financially healthy company** with a **history of sustained growth** since its inception, consistently growing in number of system implementations and customer base, and **continuous evolution of the product in accordance with market trends and customer requirements**;
- **WeDo was highly involved in the Technical design** of the interfaces between opco's and judicial entities ( ITIJ)
- We have **highly qualified and experienced resources** that can leverage previous experience to help Customers to mitigate project risks through the early identification of the potential peaks and troughs of the project;
- **Extensive experience** in developing Data retention solutions **to cope with the client's specific business, technical and environmental needs**;
- A **functionally, technically proven solution** with similar data retention requirements implementations;
